EPA Identification no.	Monitoring Frequency	Pollutant	Measurement	Unit	Comments
1 (W14)	Quarterly	Conductivity Copper pH Standing Water Level	7755 0.003 7.35 264.86	µS/cm mg/L m	The Q4 2019 water monitoring results for W14 bore are in line with historical water quality results. - Conductivity increased (+345µS/cm) from last quarter which recorded 7410µS/cm - Copper concentration decreased (-0.007mg/L) from the previous reporting period, recording 0.01mg/L. - pH increased (+0.09) from last quarter which was 7.26. - Relative standing water level increased (+12cm) from the previous quarter which was 264.74m. These minor variances are typically the result of natural groundwater migrations and are homogenous with previous reporting periods.
2 (W19)	Quarterly	Conductivity Copper pH Standing Water Level	5799 0.012 7.57 247.03	µS/cm mg/L m	The Q4 2019 water monitoring results for W19 bore are in line with historical water quality results. - Conductivity decreased (-1641µS/cm) from last quarter which recorded 7440µS/cm. - Copper concentration decreased (-0.002mg/L) from the previous reporting period, recording 0.014mg/L. - pH also decreased (-0.13) from last quarter which was 7.70. - Relative standing water level increased (+11cm) from previous quarter which was 246.92m. These minor variances are typically the result of natural groundwater migrations and are homogenous with previous reporting periods.

EPA Identification no.	Monitoring Frequency	Pollutant	Measurement	Unit	Comments
3 (W21)	Quarterly	Conductivity Copper pH Standing Water Level	13746 0.004 10.97 268.59	µS/cm mg/L m	The Q4 2019 water monitoring results for W21 bore are in line with historical water quality results. - Conductivity increased (+1214µS/cm) from last quarter which recorded 12532µS/cm. - Copper concentration slightly decreased (-0.002mg/L) from the last reporting period, which recorded 0.006 mg/L. - pH recorded a 0.17 increase from last quarter which was 10.8. - Relative standing water level increased (+9cm) from previous quarter which was 268.5m. These minor variances are typically the result of natural groundwater migrations and are homogenous with previous reporting periods.
4 (W23)	Quarterly	Conductivity Copper pH Standing Water Level	18516 0.013 6.95 259.53	µS/cm mg/L m	The Q4 2019 water monitoring results for W23 bore are in line with historical water quality results. - Conductivity increased (+1669µS/cm) from the last quarter which recorded 16847µS/cm. - Copper concentration slightly increased (+0.002mg/L) from the last reporting period, which was 0.011 mg/L. - pH recorded a slight increase (+0.05) from last quarter which was 6.9. - Relative standing water level increased (+10cm) from the previous quarter which was 259.43m. These minor variances are typically the result of natural groundwater migrations and are homogenous with previous reporting periods.
5 (W25)	Quarterly	Conductivity Copper pH Standing Water Level	1369 0.011 8.19 279.86	µS/cm mg/L m	The Q4 2019 water monitoring results for W25 bore are in line with historical water quality results. - Conductivity decreased (-273µS/cm) from last quarter which recorded 1642µS/cm. - Copper concentration decreased (-0.004mg/L) from the last reporting period, which was 0.015mg/L. pH also recorded a slight decrease (-0.13) from last quarter which was 8.32. - Relative standing water level decreased (-55cm) from previous quarter which was 280.41m. These minor variances are typically the result of natural groundwater migrations and are homogenous with previous reporting periods.

EPA Identification no.	Monitoring Frequency	Pollutant	Measurement	Unit	Comments
6 (W20)	Quarterly	Conductivity Copper pH Standing Water Level	13483 0.005 7.14 266.45	µS/cm mg/L m	The Q4 2019 water monitoring results for W20 bore are in line with historical water quality results. - Conductivity increased (+898µS/cm) from last quarter which recorded 12585µS/cm. - Copper concentration decreased slightly (-0.003mg/L) from the last reporting period, which was 0.008 mg/L. - pH also recorded a slight decrease (-0.06) from last quarter which was 7.2. - Relative standing water level increased (+17cm) from the previous quarter which was 266.28m. These minor variances are typically the result of natural groundwater migrations and are homogenous with previous reporting periods.
